Discovery Difference

Co-Occurring Conditions

Discovery specializes in resolving the underlying and co-occurring conditions that contribute to eating disorders. All programs are informed by evidenced-based treatment of trauma, self-harm, substance abuse, depression, anxiety, and mood disorders.

Certified Eating Disorder Specialists

Every program is under the supervision of one of our many CEDS Supervisors and CEDRD Supervisors who each have an average of 12–15 years of experience treating eating disorders.

Age-Specific Treatment

Center For Discovery offers gender inclusive treatment, with separate programming for adolescents and adults.

Flexible Programming

We understand people lead busy lives, so treatment is offered Monday through Saturday to provide every opportunity for therapeutic engagement.

Clients Continue Care with Outpatient Providers

Clients are encouraged to maintain their existing therapeutic and dietary relationships during their treatment at Discovery.

Ongoing Support

Clients and families can access online resources, free weekly support groups, an extensive referral network and aftercare follow-up by a licensed clinical psychologist.

Clients can continue care with outpatient providers

Clinical Program

Transforming Trauma

Providing a framework for deeper individual trauma work, clients create safety within themselves and their peer group by Eye Movement Desensitization and Reprocessing (EMDR), Trauma Focused CBT, and the Trauma Resiliency Model provided (TRM) by TRM trained therapists.

Recovery Protection

Relapse prevention is vital to sustain gains made in treatment as outpatient clients transition to lower levels of support with their team. Programs include Acceptance and Commitment Therapy (ACT), family and client tailored psycho-education, inspirational documentaries, discharge planning, and our secure online communication portal, Discovery Connect, as a recipe for sustainable recovery.

Family-Centered Programming

Weekly, three-hour family education, therapeutic meal, and multi-family process group. In addition, clients receive weekly family therapy sessions and support groups. The family is never to blame for an eating disorder, they are a crucial part of treatment and the road to recovery.

Customized Dietary Program

A three phase dietary system enhances each client's level of self-mastery over their meal plan and promotes intuitive eating as a dietary goal. Our Exposure Response Prevention (ERP) dietary experience includes meal preparation support, food science nutrition groups, ERP snacks, one-on-one dietary sessions, and meal planning.
